**DETAILED ACTION**

***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

Regarding claims 1:

The primary reason for the allowance of claim 1 is the inclusion of the current detection circuit being configured to perform an amplification factor of the current detection circuit between definite magnitudes in synchronization with the performed modulation to produce an output and demodulating the output of the current detection circuit in synchronization with the modulation. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 2-4 are allowed due to their dependency on claim 1.

Regarding claims 5:

The primary reason for the allowance of claim 5 is the inclusion of the current detection circuit being configured to perform an amplification factor of the current detection circuit between definite magnitudes in synchronization with the performed modulation to produce an output and obtaining an output of the current detection circuit in synchronization with the modulation to generate a signal that is transmitted to the switching converter control circuit. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 6-8 are allowed due to their dependency on claim 5.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following is cited to further show the state of the art with respect to methods and devices for tracking the maximum power point:

U.S. Patent No. 5,327,071 to Frederick et al. disclose a method and device for efficiently controlling the power output of a solar cell array.
